Our Vision

- Cuisine Companion is a site that allows CU students and Boulder locals to explore top rated restaurants.
 - Events
 - Deals
-

Tools We Used

- Git/Github

- PostgreSQL

- VSCode

- HTML5/CSS/Bootstrap

- EJS

Express

- Express JS

- NodeJS

- Docker

- Chai/Mocha

- Azure

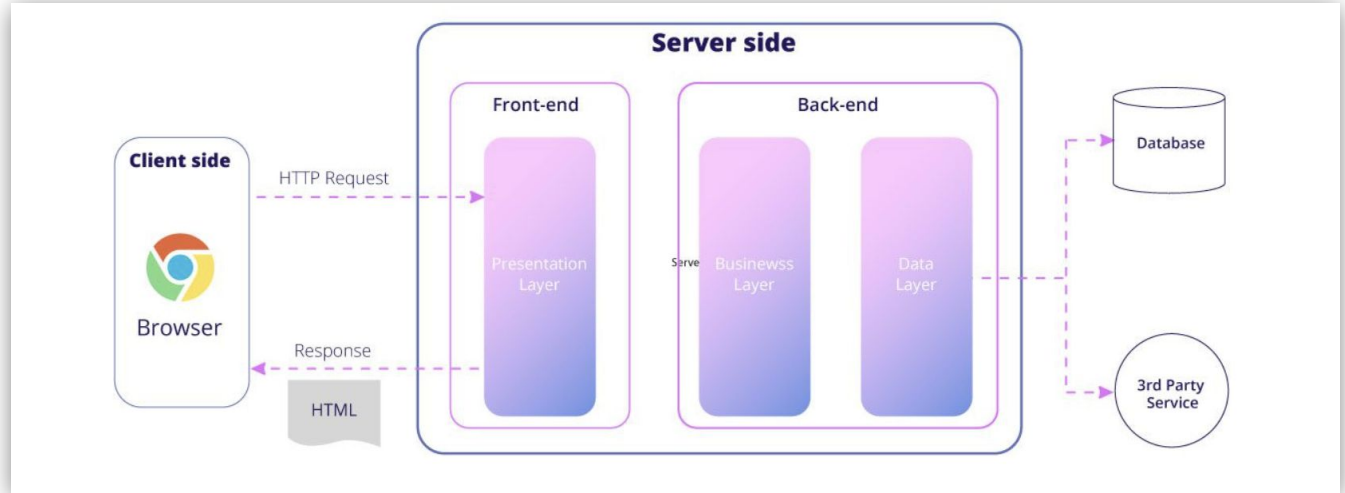

fusion

- Yelp API

Project Architecture

Challenges We Encountered

- index.js not recognizing changes to the database
 - Easy fix: remember to use “docker compose down -v”
 - This did not affect the project plans
 - Your standard git problems
 - This did not affect the project plans
 - Too much data to display on a grid-style calendar
 - We had to rethink the design for our calendar page; we decided to go with a weekly view
 - Creating good sample data
 - Used ChatGPT and boulderdowntown.com to generate large amounts of sample data
-
